

# Sepsis Alert

**1 in 3**  
Mortality rate for in-patients who contract sepsis.<sup>1</sup>

Sepsis is the leading cause of death in U.S. hospitals today, according to the Sepsis Alliance. And it doesn't end there – 62% of patients hospitalized with sepsis are re-hospitalized within 30 days. The mortality rate from sepsis increases 8% for every hour that the patient goes untreated.

Here's how a secure communication solution can speed sepsis response times for better patient outcomes.

<sup>1</sup> Sepsis Alliance 2016 Fact Sheet

## Better Outcomes Achieved with TigerConnect

- Patient safety**  
Faster response times and sepsis screening greatly reduce risks of worsening condition.
- Care team collaboration**  
Better coordinated care is delivered through EHR access & role-based messaging.
- Higher staff satisfaction**  
Improved communication with team and Pharmacy speeds antibiotic drugs to patient.
- Improved quality of care**  
Improved core measures compliance due to patients receiving timely treatment.
- Fewer medical errors**  
Coordinated effort minimizes errors; team is informed at the 6-hour check-in.
- Reduction in bed days**  
Early detection of sepsis prevents escalation and reduces length of stay.

### Roles

- In** Intensivist
- H** Hospitalist
- CN** Charge Nurse
- RT** Respiratory Therapist
- Ph** Pharmacist
- RN** Registered Nurse
