

Quick Reference Guide

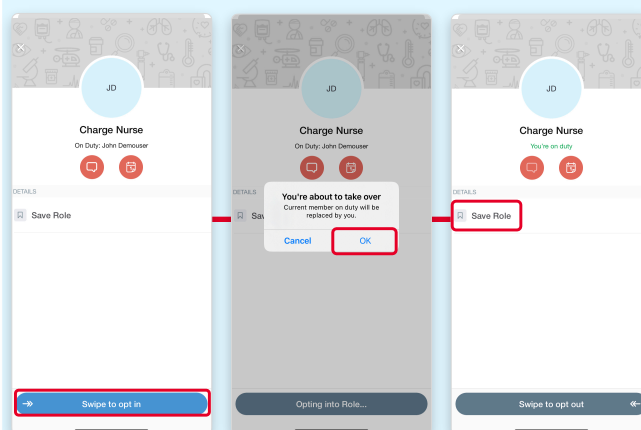

Opting In and Out of Roles (iOS)

With **TigerConnect Clinical Collaboration (Pro)**, Roles are enabled for your organization. This allows users to communicate with a Role where the messages route to the person assigned to that Role at the given time. This guide shows you how to manually opt in and out of those Roles as a user on iOS devices.

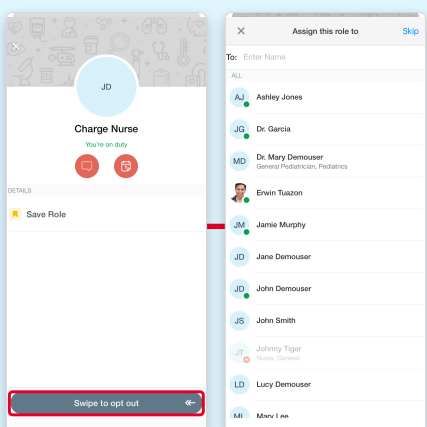

- 1 Log into TigerConnect on your iOS device. Tap on the Roles menu at the top of your screen, then tap on the Role you are opting into.

- 2 Swipe right to opt into the Role. If someone is occupying that Role, you will get a prompt indicating that the current member on duty will be replaced by you. Optionally, tap Save to My Roles for future reference.

- 3 To opt out of the Role, find it and swipe left. A prompt will appear giving you the option to Assign someone to take over or Skip and leave the Role empty. (Note that some organizations remove the Skip functionality.)

- 4 If you chose to Assign someone to this Role, that user will replace you as the user occupying that Role. If you chose Skip, a prompt will appear to confirm if you want to leave the Role empty.
