

Robust Clinical Communication Combined with Modern Physician Scheduling

Clinical Collaboration & Physician Scheduling

Simplify Workflows with Role-Based Communication & Integrated Physician Scheduling

Manual physician scheduling processes and outdated communication methods create workflow inefficiencies that negatively impact care teams and patients. Physicians, nurses, and support staff need to quickly communicate with the right person or team, but their time is often wasted searching through binders of out-of-date on-call schedules and playing endless rounds of phone tag. As a result, patient outcomes and throughput suffer as these ineffective tools prevent care teams from delivering timely, high-quality care.

TigerConnect solves these challenges by combining automated physician scheduling with role-based, HIPAA-compliant text, voice, and video communication in a single, easy-to-use platform so that the right person or team can be quickly reached at all times.

Connect Your Entire Healthcare Ecosystem

TigerConnect transforms the way your staff communicate and collaborate by connecting your entire healthcare ecosystem — nurses, physicians, support staff, patients, and external providers — all on a single platform.

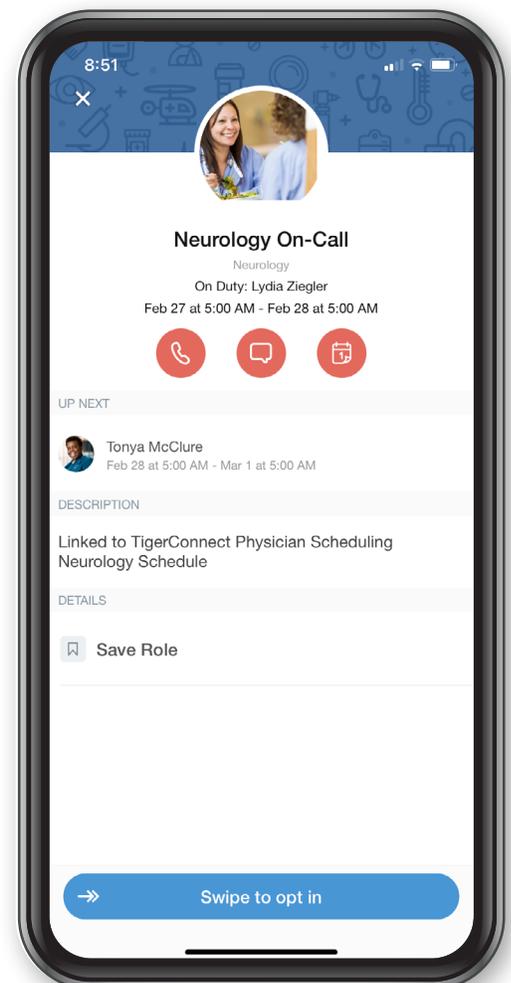

Automated, Centralized Physician Scheduling

Save countless hours by automating the creation of fair and balanced physician schedules in minutes. Manage all schedules with a centralized solution to maintain an accurate single source of truth and ensure the right physician is contacted every time.

Reach the Right People, Right Away

Need a neurology consult at 3 a.m. but don't know who's on-call? Users can be assigned to custom Roles based on their job function, such as "Neurology On-Call", allowing other users to find and contact them in seconds by simply searching for their Role.

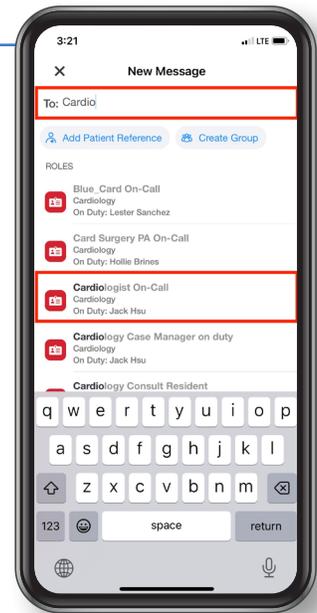

- Cloud-based, interoperable, and reliable with 99.995% uptime
- Save time with automated, up-to-date, easily accessible schedules
- Quickly reach the right person or team every time

Care Team Communication Benefits

Minimize care delays and accelerate speed to care with robust messaging features and accurate, up-to-date on-call schedules at your fingertips.

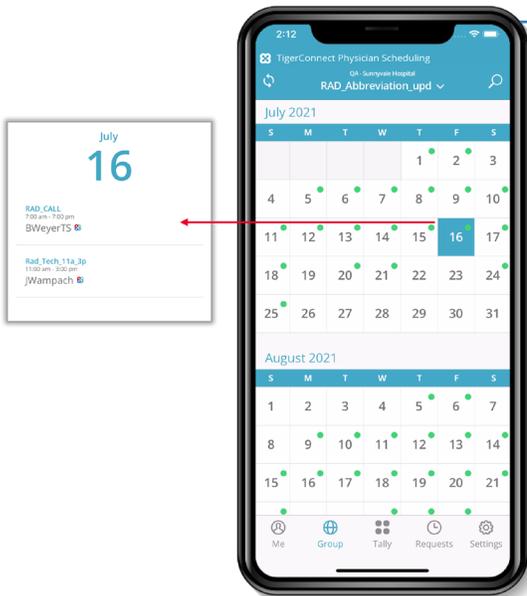

- Quickly find and contact the right on-call physician or on-duty staff member by searching for their assigned Role – no first or last name required
- Prevent the wrong physician from being contacted with Role assignments that update in real time based on schedule changes
- Preserve conversations with Roles across shift transitions to streamline handoffs and prevent lapses in care
- Instantly mobilize pre-defined Teams consisting of specific individuals and Roles for code blues, STEMIs, and other critical response scenarios to shorten response times and improve patient outcomes

Scheduling Benefits

Save time creating and managing schedules with a modern, intuitive solution that allows you to easily build and update schedules from anywhere, at any time.

- Automate the creation of shift and on-call schedules in minutes while ensuring rules, time-off requests, and preferences are considered
- Manage all schedule changes with a centralized solution to eliminate inaccurate, outdated schedules
- Swap shifts, submit time-off requests, and view real-time schedule changes from anywhere
- Reduce physician burnout with scheduling rules that ensure assignments are distributed fairly and equitably

Clinical Workflows That Improve the Way You Work
