

Virtual Wound Assessments Decrease Staff and Supply Costs by

\$40k

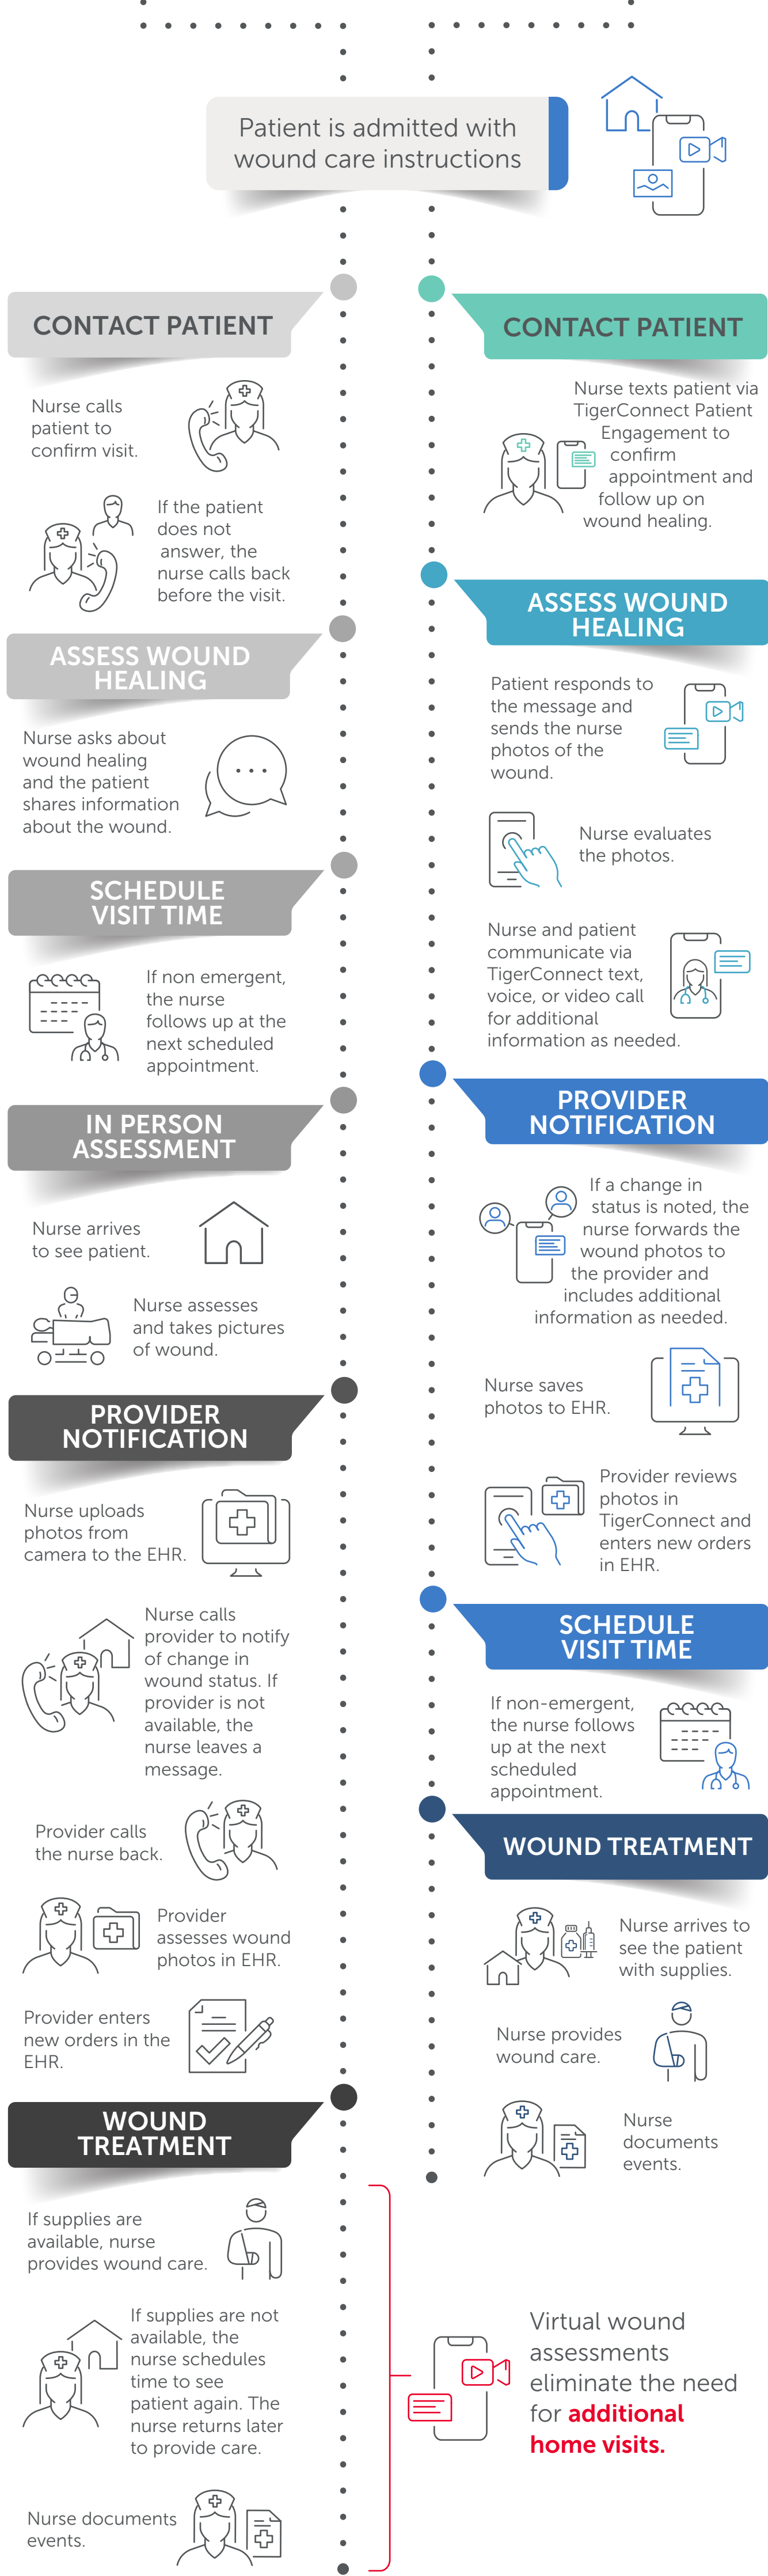

When nurses are assessing a home health patient's recovery over the phone, it can be difficult to create an appropriate care plan or know what equipment to bring to the home visit.

HIPAA-compliant video, voice, and text via TigerConnect allow nurses to accurately assess a patient's wound and collaborate with the provider in real-time.

A TYPICAL HOSPITAL WORKFLOW

THE TIGERCONNECT WORKFLOW

A TYPICAL HOSPITAL WORKFLOW

Up to
4
hours*
15+ steps

VS.

THE TIGERCONNECT WORKFLOW

Up to
2.5
hours
11 steps

*This does not include additional delays that may occur if the patient does not call the nurse back and the nurse must follow up the next day.

TigerConnect simplifies patient and provider communication – allowing the nurse to assess the patient's wound and forward photos to the provider, all in one app.

More efficient wound care workflows with TigerConnect have enabled healthcare facilities to better utilize resources and supplies, reducing costs by up to \$40,000 per facility.¹
