orchestrating care communications

SMART ROOM SUITE

Digital Door Sign

Enhance patient, visitor, and staff safety by delivering real-time isolation precautions, alerts, and critical patient details directly outside the room, supporting a more consistent, reliable, and error-resistant care environment.

Augment Safety Protocols with Real-Time Room Status

The Digital Door Sign connects with the EHR to display isolation levels, any necessary precautions, and active safety alerts such as fall risk, NPO, and allergies. When information isn't captured in the EHR, clinicians can manually add alerts using the touch-enabled display, ensuring complete and up-to-date communication at the point of entry.

Flexible, Reliable, Paper-Free Signage

Visual Safety Alerts

On-screen alerts and color-coded backlit frames work together to notify staff and visitors of patient needs and room-level risks. These visual cues increase situational awareness from both near and far, helping teams respond quickly and maintain patient safety and satisfaction.

Accurate Digital Updates

Remove the need for magnets, tape, or paper postings by automatically updating patient information in one consistent location, ensuring accuracy and improving efficiency.
